

Staff Report 52

APPLICANT:

David Evans and Associates, Inc.

PROPOSED ACTION:

Issuance of a non-exclusive statewide General Offshore Geophysical Survey Permit.

AREA, LAND TYPE, AND LOCATION:

State Marine Waters (as defined in Cal. Code of Regs., tit. 2, § 2100.03(h)), from the mean high tide line to 3 miles offshore including granted or ungranted tidelands and submerged lands.

AUTHORIZED USE:

Collection of geophysical information throughout offshore California.

TERM:

3 years, beginning June 23, 2026.

CONSIDERATION:

The Applicant has submitted the \$5,000 fee.

SPECIFIC PERMIT PROVISIONS:

The General Permit requires the permittee to provide staff with a Marine Wildlife Contingency Plan, Oil and General Spill Contingency Plan, and post-survey data reports and records of biological observations. Other requirements include: 21-days advance notice of survey activity to the Commission and United States Coast Guard Notice to Mariners, the location of the survey, and the technical descriptions and specifications of all survey equipment to be used. Staff may obtain copies of all data derived from any and all surveys under this General Permit upon request.

STAFF ANALYSIS AND RECOMMENDATION:

The Applicant has applied for a General Permit pursuant to the Commission's Geophysical Survey Permit Program. A General Permit is issued to qualified companies and organizations to perform low-energy geophysical surveys of the ocean bottom for purposes including, but not limited to:

- Scientific research, including surveys of nearshore sand erosion and deposition, seafloor changes, and seafloor topography and bathymetry.
- Surveying existing pipeline routes and assessing any structural damage, or free spanning (an area between points where the pipeline is supported on the seafloor).
- Identifying and avoiding seafloor faults and hazards when designing pipeline and cable projects, reducing the likelihood of damage due to these hazards.
- Surveying existing fiber-optic cables, utilities, and other seafloor structures to determine how well they are buried.
- Benthic habitat surveys, hard bottom map development, and mapping of essential fish habitat or cultural resources indicating where the placement of permanent or temporary objects (e.g., cables or anchors) should be precluded.
- Searching for the locations of historic shipwrecks, other sunken boats, airplanes, and archaeological sites.

The General Permit authorizes a permittee to conduct these activities on State sovereign land, including granted or ungranted tidelands and submerged lands, and the beds of navigable waterways. Each permittee must comply with pre-survey, survey, and post-survey requirements to ensure that the survey activities address and minimize potential impacts to aquatic life or to the environment as required by statute.

Activities under the General Permit must also comply with limitations that protect the environment, as described in the Commission's regulations made effective on January 1, 2020, as Article 2.9.1, Permits for Geophysical Surveys (Cal. Code Regs., tit. 2, § 2100 et seq.) (Article 2.9.1).

AUTHORITY:

Public Resources Code sections 6005, 6212.3, 6216, and 6301; California Code of Regulations, title 2, section 2100 et seq.

PUBLIC TRUST AND STATE'S BEST INTERESTS:

David Evans and Associates, Inc. conducts subsea surveys and mapping and has applied for a permit to conduct low-energy geophysical surveys. Oceanographic study has been recognized by the courts to be a use consistent with the common law Public Trust Doctrine. (See, for example, *Marks v. Whitney* (1971) 6 Cal. 3d 251, 259-260.) The marine activities conducted under this proposed General Permit are water-dependent, using acoustic, noise-generating equipment such as sub-bottom profilers and multi-beam echosounders at frequencies at or above the hearing range of marine mammals. The use of high energy equipment, such as airguns or water guns, is expressly prohibited under the General Permit.

Staff believes that granting this General Permit is consistent with and will not substantially interfere with Public Trust uses at this time and for the foreseeable term of the General Permit.

CONCLUSION:

For all the reasons above, staff believes the approval of the permit application will not substantially interfere with Public Trust needs and is in the best interests of the State. Staff recommends approval of this General Permit.

OTHER PERTINENT INFORMATION:

1. Approval or denial of the application is a discretionary action by the Commission. Each time the Commission approves or rejects a use of sovereign land, it exercises legislatively delegated authority and responsibility as trustee of the State's Public Trust lands as authorized by law. If the Commission denies the application, the Applicant will not be authorized to conduct geophysical surveys on sovereign land. Upon expiration or prior termination of the permit, the applicant has no right to a new permit or to renewal of any previous permit.
2. In 2015, the Governor signed [AB 1274](#), codifying Public Resources Code section 6212.3 (geophysical survey permits). AB 1274 affirmed the Commission's authority to issue geophysical permits "subject to terms and conditions as the Commission shall specify to ensure public safety and protection of the environment."
3. This action is consistent with the "Meeting Evolving Public Trust Needs" Strategic Focus Area of the Commission's 2021-2025 Strategic Plan.

4. Pursuant to the California Environmental Quality Act (CEQA), staff prepared a Mitigated Negative Declaration (MND) identified as MND No. 751, State Clearinghouse No. 2013072021, and a Mitigation Monitoring Program (MMP) that were adopted by the Commission on September 20, 2013 ([Item 120](#)), for implementation of the Low-Energy Offshore Geophysical Permit Program Update. On April 23, 2014, the Commission adopted an addendum to the MND prepared by staff, which revised the General Permit and MMP ([Item 67](#)).
5. This activity involves lands identified as possessing significant environmental values pursuant to Public Resources Code section 6370 et seq. At the time the Commission adopted the MND in 2013, staff concluded that such activity would not affect those significant lands, and the Commission found the activity to be consistent with its use classification pursuant to Public Resources Code section 6370 et seq.

RECOMMENDED ACTION:

It is recommended that the Commission:

CEQA FINDING:

Find that the MND, CSLC MND No. 751, State Clearinghouse No. 2013072021, and an MMP were adopted by the Commission on September 20, 2013; that the addendum to the MND, including a revised General Permit and MMP, was adopted by the Commission on April 23, 2014, pursuant to the provisions of CEQA; that the Commission reviewed and considered the information contained in the previously adopted MND and addendum; and that in the Commission's independent judgment, the scope of activities to be carried out under the permit to be issued under this authorization has been adequately analyzed; that none of the events specified in Public Resources Code section 21166 or CEQA Guidelines section 15162 has resulted in any new or substantially more severe significant impacts; and, therefore, no additional CEQA analysis is required.

PUBLIC TRUST AND STATE'S BEST INTERESTS:

Find that activities authorized by the proposed General Permit will not substantially impair the public rights to navigation and fishing or substantially interfere with Public Trust needs and values for the term of the permit; is consistent with the common law Public Trust Doctrine; and is in the best interests of the State.

AUTHORIZATION:

Authorize issuance of a non-exclusive statewide General Offshore Geophysical Survey Permit to the Applicant to conduct low-energy geophysical surveys for a term of 3 years, beginning June 23, 2026.
